

GCN + MLP Forecaster with Concatenation Fusion (GCNMLPForecaster) — Architecture

Input	ts projection	MLP block
GCN layer	LayerNorm	Forecast head
Target embedding z	Concat fusion	Output

window=30 lookback=30 model_horizon=1 (recursive x 152) GCN(30→32→64) ts_proj=660→64 concat→128 MLP(256, 128)

Recursive inference loop (repeated 152 times)
